ALLOGRAFT & BONE TISSUE

Performance Graft's bone tissue and allograft are a family of bone products scientifically engineered, processed, and sterilized, to meet the dynamic needs of today's spine surgeons.

We strive to ensure that our allograft products are more refined - We precision machine the surfaces of our cervical allografts, so surgeons can rest assure that the dimensions of the insert they have selected will match the dimensions they require. This approach helps reduce the chance of complication post operatively and contribute to the allograft's ease of placement.

By offering this osteoconductive scaffold to promote bone regeneration we can rest assure that the tissue processed by Performance Grafts improves the quality of life for our growing number of recipients everyday.
